WHO WE ARE

About Groundwater Works Kenya

Groundwater Works Kenya is a registered and licensed hydrogeology and borehole drilling firm dedicated to providing reliable, affordable, and professional water solutions to households, farms, institutions, and industries across Kenya. Our team of qualified hydrogeologists and drilling technicians brings together deep technical expertise and hands-on field experience to guide every client from the first site assessment through to a fully functional water source.

With over 100 boreholes successfully drilled and countless hydrogeological surveys conducted nationwide, we have built a reputation as a dependable partner in the search for sustainable groundwater. We are especially well established in the North Eastern and Northern regions of Kenya, which are some of the country's most water-stressed and geologically challenging areas, where our experience allows us to deliver results even in difficult terrain.

Every project we undertake is carried out by registered, licensed hydrogeologists who work in close collaboration with the Water Resources Authority (WRA), ensuring that all surveys, permits, and drilling works are fully compliant with national water resource regulations.

OUR VISION

To be the most trusted groundwater development company in Kenya and the wider East African region, bridging the gap between communities and sustainable water access.

OUR MISSION

To deliver accurate, data-based hydrogeological surveys and high-quality borehole drilling services that guarantee our clients dependable water sources, while upholding the highest standards of professionalism, compliance, and integrity.

CORE VALUES

Integrity

We give honest, science-backed recommendations, even when it means advising against drilling.

Compliance

We operate strictly within WRA and NEMA regulatory frameworks.

Excellence

We apply proven survey methods and quality equipment to maximise borehole success rates.

Reliability

We honour our timelines and commitments to every client, in every region we serve.

Community Impact

We prioritise water access for underserved communities in arid and semi-arid regions.

EXPERIENCE & CAPABILITY

Our Track Record

Our experience is reflected in the scale and reach of the work we have completed across the country.

100+ Boreholes Successfully Drilled	COUNTLESS Hydrogeological Surveys Conducted	47 Counties Served Across Kenya
---	---	---

Our strongest footprint is in the Northeastern and Northern parts of Kenya, including the arid and semi-arid regions where accurate hydrogeological interpretation is critical to a borehole's success. Our familiarity with the geology, terrain, and water regulatory landscape of these regions sets us apart from firms with limited field exposure to these harder-to-serve areas.

END-TO-END GROUNDWATER SOLUTIONS

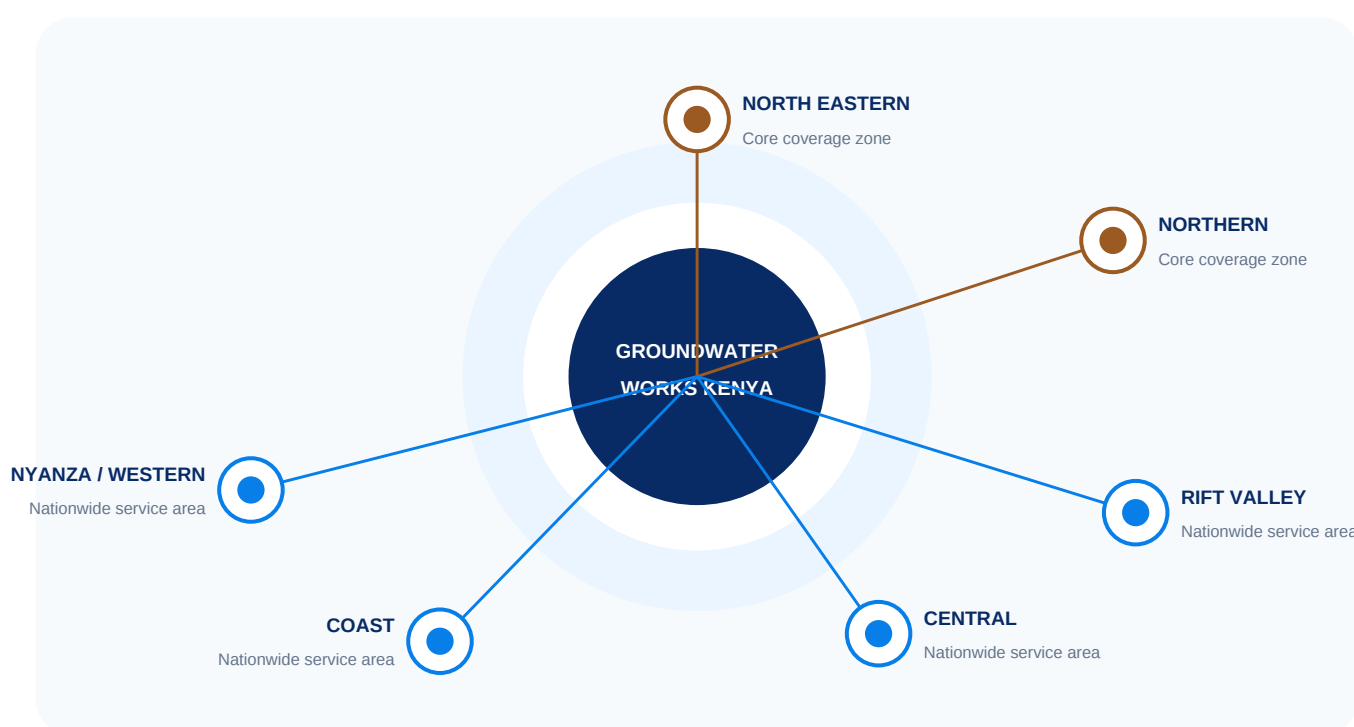

Our Services

01 Hydrogeological Surveys We conduct professional groundwater surveys to determine the most viable drilling point, expected depth, rock formation, and anticipated water yield before drilling begins, minimising the risk of a dry or low-yield borehole.	02 Borehole Drilling Using well-maintained drilling rigs and experienced crews, we carry out mobilisation, drilling, and casing works tailored to the geology and depth requirements identified during the survey.
03 Test Pumping & Water Analysis Following drilling, we conduct test pumping to determine the borehole's yield/recharge rate, and coordinate water quality analysis to confirm suitability for domestic, agricultural, or industrial use.	04 Pump Supply & Installation We supply and install submersible pumps—electric, solar, or hybrid—matched to each borehole's depth and yield characteristics.
05 Regulatory Permitting & WRA Liaison Leveraging our strong working relationship with the Water Resources Authority (WRA), we support clients through the permitting process, from survey report submission to drilling authorisation and water use permits.	06 Borehole Rehabilitation & Deepening We assess underperforming or ageing boreholes and carry out deepening, redevelopment, or rehabilitation works to restore optimal yield.

NATIONWIDE COVERAGE

Areas We Serve

Groundwater Works Kenya operates nationwide, with a strong and proven track record in the North Eastern and Northern counties of Kenya, alongside consistent project delivery across other regions of the country. Our teams are mobile and equipped to reach remote and rural sites, ensuring water access reaches the communities that need it most.

North Eastern & Northern Kenya

NATIONWIDE MOBILITY
Teams equipped to reach remote and rural sites across Kenya

THE GROUNDWATER WORKS ADVANTAGE

Why Choose Us

01 Registered & licensed expertise Registered and licensed hydrogeologists on every project.	02 Regulatory coordination Strong, direct working relationship with the Water Resources Authority (WRA).
03 Proven delivery A proven track record of over 100 successfully drilled boreholes.	04 Regional experience Unmatched regional experience in North Eastern and Northern Kenya.
05 End-to-end service End-to-end service, from survey, to drilling, to pump installation.	06 Science-led guidance Transparent, honest guidance grounded in scientific survey data.

LET'S DEVELOP YOUR WATER SOURCE

We welcome the opportunity to discuss your water needs and provide a tailored solution for your home, farm, or organisation.
